

**TEST UNIT FOR INTERFACE BETWEEN
TELEPHONE COMPANY DEMARCATION POINT DEVICE AND
CUSTOMER'S TELEPHONE SYSTEM**

Abstract of the Disclosure

5 A test unit for determining whether a local telephone company demarcation point device is providing telecommunication signals to one of a plurality of telephone lines of a telephone system includes: a demarcation point connector that is configured to interface with a connector of the demarcation point; a telephone system connector that is
10 configured to interface with a connector of the telephone system; a plurality of switches, each of the switches being configured to selectively connect a connection site of the demarcation point device with a corresponding connection site of the telephone system, the selective connection providing a telephone line therebetween; and an indicator that signals whether a designated connection site of the demarcation point device is providing telecommunication signals to its respective telephone line.
